To: packet-radio@ucsd.edu

I am trying to get my KAMPlus working with the NOSgas files I retrieved  
from here. I modified the kisson.dia file as follows:

send "INTFACE KISS\r"

When I start nos and press F9 to monitor the packets, I don't see any  
incoming packets. When I try to do a connect with AX.25 I see the NOS try  
to send the packets but the transmitter never gets keyed.

I can work fine on AX.25 using HM2PLUS to connect but I would like to get  
my TCPIP working.

Please e-mail any suggestions to rbeckett@tfs.com
